What is Screener and Why it is important?

A screener is a screening or filtering tool to analyse stocks universe in a customized manner. Finding a multibagger out of thousands of stocks is a daunting task if one would have to go through financials of each company listed on exchanges. In order to succeed in the long term, one needs to have a sound and discipline investment strategy based on underlying fundamentals. One can save time, energy and also spot the right opportunity quickly by filtering large chunk of datasets and boil down the stocks based on your style of investment or trade. Screener helps you to make an investment decision by validating the information rather than simply investing based on rumors. The most important aspect of screeners is to narrow the list of stocks research by removing outliers and concentrate on few stocks for further in-depth research.

Aditya Birla Money's Screeners

Aditya Birla Money's research team has handpicked screeners after years of experience in research and querying historical data to arrive at modelled screeners which have proved their performance in the past. Our screeners also display performance return chart of each screeners and how they have fared on daily basis. A screener portfolio is built based on equal weightage stocks satisfying the criteria and the portfolio is rebalanced on a daily basis. So if you want to see which screener has given maximum returns, you can simply get it in one click by sorting it and find the best performing screener in a particular time interval.

A screener is a filtering tool to analyse stocks universe in a customized manner. Get Income, Quality, Value & Growth screeners under the Screeners Sub Menu
